Createspace Independent Publishing Platform, United States, 2016. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Numerous fields of evidence tell us that the next Ice Age is near. Most of the evidence was discovered in the 1990s and thereafter. Some evidence is measured in ice cores; some is measured in space, by satellites. Some measurements are also made on the ground in terms of measurements of the Earth's magnetic-pole drift observed in northern Canada. All of this is seen combined with high-energy physics experiments at a leading national laboratory, and is also explored in the small in static experiments. Against the background of these widely diverse types of evidence that have been recently discovered, the historic Little Ice Age in the 1600s, takes on a new dimension as a yardstick for measuring the future that by this evidence promises to be up to 40-times colder than the Little Ice Age had been. The evidence poses a challenge. In the Little Ice Age between 10 and up to 30 of the populations in Europe had perished by starvation. And from the last Big Ice Age only 1-10 million people emerged alive. We want to do far better than that, this time around; and we can, with large-scale technological infrastructures for our food supply. But will create them? Will we get the job done in the 30 years we still have left before the Ice Age starts anew? And how certain are we that the phase shift to the next glaciation period will begin in the 2050s? It takes an independent researcher to brake the taboos that have kept mainstream cosmology imprisoned, increasingly, during the past century, even while the universal taboos are known to be wrong. The Illustrated Science series...
